

Lake Aid BioX

Easy-to-use,
no mess, no
unsightly rotting
straw, a pure natural
straw extract for clearer
water.

Using **Lake Aid BioX** for conditioning contained water is more effective than straw, it's economical, works faster and totally eliminates the high cost of transporting and handling barley straw.

The benefits of **Lake Aid BioX**:

- Harmless to pets
- Harmless to fish and wildlife in ponds
- Controls algae and filamentous algae (blanket weed)
- Accelerates the clearing of the green water
- Contains no synthetic chemicals or artificial pesticides
- Becomes effective weeks earlier than barley straw
- Can safely be used in ponds with filters and water features
- Excellent value
- Environmentally friendly

The A.G.A. Group's Biologists have concentrated the inhibiting chemical compounds produced by barley straw into a practical easy to apply extract

The application of **Lake Aid BioX** barley straw concentrate has the same inhibiting effect on the growth of algae without the often arduous and untidy process of introducing and removing large quantities of barley straw.

ALGAE CONTROL.

Lake Aid BioX is a concentrate of barley straw which conditions the water to inhibit and control algae growth. For years' environmentalist and pond keepers alike have been using barley straw treatment as a control against the nuisance of algae. This laborious and expensive control is no longer the ideal answer.

Lake Aid BioX should be applied initially at a dose rate of 4 litres - 5 litres per acre before dilution.

The concentrate should be added to the water body by mixing at least 1 part concentrate to parts water, this is done, not directly to dilute the product, but simply to create volume thus ensuring a good initial spread across the entire area of the lake.

Further weekly treatment should then be carried out at 1 litre per acre dosage, still diluting the product for ease of application across the water surface.

Ideally the dilute concentrate should be applied from a boat preferably by spraying out through a knapsack sprayer which should be kept clean of any other chemicals.

Alternatively it can be drizzled gradually into a running inlet which will then naturally distribute it with the flows and currents.

Lake Aid BioX contains: Aqueous barley straw extract as a natural source of Hydrogen peroxide and plant lignin.

5

DOSAGE.

Lake Aid BioX is available in handy 25 litre drums.

Other pack options such as IBC (bulk bags) and bulk product via road tanker may also be available.

Initial application rates 5 litre per acre. Subsequent regular applications 1litre per acre should be carried out at weekly intervals

The treatment should be carried out through the algae season. We therefore recommended that the critical application of Lake Aid BioX is commenced in early spring and used throughout the spring and summer to prove most effective in the control of algae.
